Subject: Zenith Plan Updates

Good afternoon Nathan,

As we just discussed over the phone we are hoping to obtain some additional information into your spill contingency plan.

1) Currently in Volume 2 of your spill contingency plan contains a MSDS for Chevron Crude Oil from 2001 which covers various types of crude oils ranging in specific gravity from .75 – 1.04. The movement of crude oil on the Willamette and Columbia Rivers is still a relatively new phenomenon for our agency and we are seeking to obtain the best information available on products traveling on waters of the state so that we can best prepare ourselves for a spill. Please provide a SDS for each crude oil product to DEQ prior to upcoming transfers. A duplicate SDS for transfers of a product you have already provided previously is not required in the event of multiple transfers of the same product.

2) DEQ currently has a "Preliminary Plan" for Zenith. An updated plan is requested.

3) If possible DEQ would appreciate a rough schedule of deliveries anticipated for 2018 involving potentially sinking oils. This is intended to assist us in planning for future needs for submerged oil response.
